**PURATEX® care set for velvet textile**

Regular cleaning with the Puratex® velvet brush

Regular use helps to reestablish the fine, delicate fibers and make the velvety surface plushy again. First, the velvet is brushed carefully and without pressure. Always treat the complete surface from seam to seam. Then vacuum the brushed out fibers using the upholstery nozzle of a vacuum cleaner, at the lowest level (max. 500 w).

To protect your textile against stains and soiling, we recommend to impregnate it with the PURATEX® protection spray twice a year after cleaning. Shake bottle well before use. Spray on thinly and evenly from a distance of 30 cm. Hold bottle vertically. Let dry well. The full protection-effect will be given after 24 hours.

Stain removing

Put the Puratex® strong cleaner on a cloth and treat the stain from the edges to the centre. Do not treat only the stain, but always a bigger area. Once you removed the stain, clean the whole area from seam to seam with distilled water. Let dry well and protect with the PURATEX® protection spray.

Important: Before use, please test the products on a hidden area.
